১০. বিবিধ আলোচনা।

সভার আলোচনা ও সিদ্ধান্ত ঃ

সভাপতি মহোদয় উপস্থিত সকলকে স্বাগত জানিয়ে সভার কার্যক্রম শুরু করেন। তিনি ঔষধ প্রশাসন অধিদপ্তরের মহাপরিচালক মেজর জেনারেল মোহাম্মদ ইউসুফকে সভার আলোচ্যসূচী উপস্থাপনের জন্য অনুরোধ করেন। তিনি সভার আলোচ্যসূচী উপস্থাপন করেন।

তিনি উল্লেখ করেন যে, ইতোমধ্যে ড্রাগ কন্ট্রোল কমিটির ২৫৩ তম সভায় উপস্থাপনের লক্ষ্যে নিম্নবর্ণিত মোট ০৩ টি টেকনিক্যাল সাব কমিটির সভা অনুষ্ঠিত হয়েছে।

- ডিসিসি এর টেকনিক্যাল সাব কমিটির (হিউম্যান মেডিসিন ও ভ্যাক্সিন) সভা ০২ টিঃ ২৪/১০/২০২১ ও ১৪/১২/২০২১ তারিখে অনুষ্ঠিত হয়।
- হার্বাল এডভাইজরি কমিটির (ডিসিসি এর টেকনিক্যাল সাব কমিটি) সভা ০১ টিঃ ২৮/১২/২০২১ তারিখে অনুষ্ঠিত হয়।

ড্রাগ কন্ট্রোল কমিটির ২৫২ তম সভার কার্যবিবরণী নিশ্চিতকরণঃ

তিনি প্রথমেই ড্রাগ কন্ট্রোল কমিটির ২৫২ তম সভার কার্যবিবরণী নিশ্চিতকরণ সংক্রান্ত বিষয়াদি উপস্থাপন করেন। সভায় নিম্নবর্ণিত সিদ্ধান্ত সহকারে ড্রাগ কন্ট্রোল কমিটির ২৫২ তম সভার কার্যবিবরণী নিশ্চিত করা হয়।

(ক) নিম্নবর্ণিত দুইটি পদের বিষয়ে সাইক্রিয়াটিস্ট এর মতামত গ্রহণের জন্য পুনরায় পত্র প্রেরণের সিদ্ধান্ত গৃহীত হয়।

পদসমূহঃ

(a) Pitolisant hydrochloride equivalent to Pitolisant 4.45 mg Tablet,

(b) Pitolisant hydrochloride equivalent to Pitolisant 17.8 mg Tablet

(খ) নিম্নবর্ণিত পদের বিষয়ে ইউরোলজিস্ট এর মতামত গ্রহণের জন্য পুনরায় পত্র প্রেরণের সিদ্ধান্ত গৃহীত হয়।

পদটিঃ

(a) Tiopronin 100 mg delayed release tablet

(গ) MUPS হিসেবে প্রয়োজনীয় রেফারেন্স না থাকায় Rabeprazole Sodium Delayed release Pellets 15% w/w (Mups) Ph. Grade 133.333 mg (Eq. to 20 mg of Rabeprazole Sodium , MUPS Tablet টি ড্রাগ কন্ট্রোল কমিটির ২৫২ তম সভায় বাতিল করা হয়। মেসার্স বীকন ফার্মাসিউটিক্যালস পদটি বহাল রাখার বিষয়ে আপিল করে, যা এখনও নিষ্পন্ন হয়নি। এতদ্ববিষয়ে আপিলের সিদ্ধান্ত চূড়ান্ত হিসেবে বিবেচিত হবে।

(ঘ) বর্তমান বিশ্বে প্রায় 1.27 million মানুষ Antimicrobial Resistant (AMR) এর কারণে মারা যাচ্ছে। এ অবস্থা চলতে থাকলে ২০৫০ সালে প্রতি বছর মারা যাবে প্রায় ১ কোটি মানুষ। Antimicrobial Resistant (AMR) এর বিষয়টিকে বিবেচনায় নিয়ে ড্রাগ কন্ট্রোল কমিটির ২৫২ তম সভায় এন্টিবায়োটিকগুলোকে সহজে চেনার জন্য আইডেন্টিফিকেশন মার্ক প্রণয়নের বিষয়ে ঔষধ প্রশাসন অধিদপ্তর এবং ঔষধ শিল্প সমিতিকে আলোচনার মাধ্যমে সিদ্ধান্ত গ্রহণের নির্দেশনা প্রদান করা হয়।

ঔষধ প্রশাসন অধিদপ্তর হতে ফার্মেসী রিটেইলারদের মধ্যে Antimicrobial Resistant (AMR) এর বিষয়ে সচেতনতার স্তর যাচাইয়ের লক্ষ্যে বাংলাদেশের ০৮ টি বিভাগে ৪২৭ জন ফার্মেসী রিটেইলারদের উপর একটি সার্ভে করা হয়। যেখান থেকে দেখা গেছে ৬৭.৩% ফার্মেসী রিটেইলার এন্টিমাইক্রোবিয়াল মেডিসিন চেনেন না এবং তারা সহজেই এন্টিবায়োটিকগুলো সনাক্ত করতে পারেন না। প্রস্তাবিত ঔষধ আইনে প্রেসক্রিপশন ছাড়া এন্টিবায়োটিক বিক্রয়ে শাস্তির বিধান রাখা হয়েছে। কিন্তু এই ফার্মেসী রিটেইলাররা যেন সহজেই এন্টিবায়োটিকগুলো সনাক্ত করতে পারেন সে ব্যবস্থা রাখাও প্রয়োজন।

যে কারণে ঔষধ প্রশাসন অধিদপ্তর হতে আর একটি Key Informant Interview ১৪ জন ব্যক্তির নেওয়া হয়। উক্ত Key Informant Interview এ অনেকগুলো আইডেন্টিফিকেশন মার্কসহ এন্টিবায়োটিকের প্রাইমারী ও সেকেন্ডারী প্যাকেজিং মাটেরিয়াল এর ডিজাইন উপস্থাপন করা হয় এবং এর উপর তাঁদের মতামত প্রদানে জন্য বলা হয় এবং তাঁরা যে সমস্ত প্যাকেজিং মাটেরিয়াল এর ডিজাইন ইফেক্টিভ বলে মতামত

দেন সেগুলো ৩০ জানুয়ারী, ২০২২ এ ঔষধ প্রশাসন অধিদপ্তর ও বাংলাদেশ ঔষধ শিল্প সমিতির মাধ্যে এতদ্ব বিষয়ে অনুষ্ঠিত সভায় উপস্থাপন করা হয়।

উক্ত সভায় নিম্নোক্ত আইডেন্টিফিকেশন মার্কসহ এন্টিবায়োটিকের প্রাইমারী ও সেকেন্ডারী প্যাকেজিং মাটেরিয়াল এর বিষয়ে নিম্নোক্ত সুপারিশ করা হয়ঃ

"এন্টিবায়োটিক এর কার্টনের একপাশে লাল আইডেন্টিফিকেশন মার্ক এর উপর বাংলায় "এন্টিবায়োটিক" এবং "নিবন্ধিত চিকিৎসকের প্রেসক্রিপশন ছাড়া ব্যবহার করবেন না" লিখা থাকবে এবং কার্টনের অপর পাশে লাল আইডেন্টিফিকেশন মার্ক এর উপর ইংরেজীতে লিখা থাকবে "Antibiotic" এবং " Do not use without prescription of registered physician". প্রাইমারী প্যাকেজিং (স্ট্রিপ, ব্লিস্টার) এর দুই পাশে লাল আইডেন্টিফিকেশন মার্ক এর উপর বাংলায় "এন্টিবায়োটিক" এবং ইংরেজীতে "Antibiotic" লিখা থাকবে।
এই সিদ্ধান্ত বাস্তবায়নের জন্য এন্টিবায়োটিক উৎপাদনকারী প্রতিষ্ঠানসমূহকে ০৬ মাস সময় দেওয়া হবে। তবে যারা এন্টিবায়োটিক জাতীয় পদের রেজিস্ট্রেশনের জন্য নতুন আবেদন করবেন, তারা মোড়ক সামগ্রী অনুমোদনের সময় উক্ত নির্দেশনা মোতাবেক মোড়ক সামগ্রী দাখিল করবেন।"

সিনিয়র সচিব, স্বাস্থ্য সেবা বিভাগ, স্বাস্থ্য ও পরিবার কল্যাণ মন্ত্রণালয় বলেন, এটি নিঃসন্দেহে একটি যুগান্তকারী পদক্ষেপ এবং এ জন্য তিনি ঔষধ প্রশাসন অধিদপ্তর এবং ঔষধ শিল্প সমিতিকে সাধুবাদ জানান। তিনি পরবর্তীতে Antimicrobial Resistance নিয়ে সারাদেশব্যপি জনসচেতনতা বৃদ্ধিতে awareness program করার এবং প্রিন্ট ও ইলেকট্রনিক মিডিয়ার মাধ্যমে বিষয়টি প্রচারের জন্য ঔষধ প্রশাসন অধিদপ্তরকে নির্দেশনা প্রদান করেন। সভায় সর্বসম্মতিক্রমে নিম্নোক্ত সিদ্ধান্ত গৃহীত হয়।

ড্রাগ কন্ট্রোল কমিটির সিদ্ধান্তঃ

"এন্টিবায়োটিক এর কার্টনের একপাশে লাল আইডেন্টিফিকেশন মার্ক এর উপর বাংলায় "এন্টিবায়োটিক" এবং "নিবন্ধিত চিকিৎসকের প্রেসক্রিপশন ছাড়া ব্যবহার করবেন না" লিখা থাকবে এবং কার্টনের অপর পাশে লাল আইডেন্টিফিকেশন মার্ক এর উপর ইংরেজীতে লিখা থাকবে "Antibiotic" এবং " Do not use without prescription of registered physician". প্রাইমারী প্যাকেজিং (স্ট্রিপ, ব্লিস্টার) এর দুই পাশে লাল আইডেন্টিফিকেশন মার্ক এর উপর বাংলায় "এন্টিবায়োটিক" এবং ইংরেজীতে "Antibiotic" লিখা থাকবে।
এই সিদ্ধান্ত বাস্তবায়নের জন্য এন্টিবায়োটিক উৎপাদনকারী প্রতিষ্ঠানসমূহকে ০৬ মাস সময় দেওয়া হবে। তবে যারা এন্টিবায়োটিক জাতীয় পদের রেজিস্ট্রেশনের জন্য নতুন আবেদন করবেন, তারা মোড়ক সামগ্রী অনুমোদনের সময় উক্ত নির্দেশনা মোতাবেক মোড়ক সামগ্রী দাখিল করবেন।"

Contraindication: It is contraindicated in all diseases associated with hypercalcaemia. It is also contraindicated in patients with known hypersensitivity to Cholecalciferol (or medicines of the same class) and any of the constituent excipients. Cholecalciferol is contraindicated if there is evidence of vitamin D toxicity. Side-effect: Generally, all nutritional supplements are considered to be safe and well tolerable. However, few side-effects can generally occur including hypercalcaemia syndrome or Calcium intoxication (depending on the severity and duration of hypercalcaemia), occasional acute symptoms include anorexia, headache, nausea, vomiting, abdominal pain or stomach ache and constipation Warning and Precautions: Cholecalciferol is usually nontoxic in physiologic doses. Chronic or acute administration of excessive doses may lead to hypervitaminosis D, manifested by hypercalcemia and its sequelae. The use of vitamin D in excess of the recommended dietary allowance during normal pregnancy should be avoided unless, in the judgment of the physician, potential benefits in a specific case outweigh the significant hazards involved. Never Share a Pen Between Patients INSULIN GLARGINE & LIXISENATIDE COMBINATION prefilled pens must never be shared between patients, even if the needle is changed. Sharing of the pen poses a risk for transmission of blood-borne pathogens. Pancreatitis Acute pancreatitis, including fatal and non-fatal hemorrhagic or necrotizing pancreatitis, has been reported postmarketing in patients treated with GLP-1 receptor agonists. In clinical trials of lixisenatide, a component of INSULIN GLARGINE & LIXISENATIDE COMBINATION, there were 21 cases of pancreatitis among lixisenatide-treated patients and 14 cases in comparator-treated patients (incidence rate of 21 vs 17 per 10,000 patient-years). Lixisenatide cases were reported as acute pancreatitis (n=3), pancreatitis (n=12), chronic pancreatitis (n=5), and edematous pancreatitis (n=1). Some patients had risk factors for pancreatitis, such as a history of cholelithiasis or alcohol abuse. After initiation of INSULIN GLARGINE & LIXISENATIDE COMBINATION, observe patients carefully for signs and symptoms of pancreatitis (including persistent severe abdominal pain, sometimes radiating to the back and which may or may not be accompanied by vomiting). Warnings and Precautions: General This product, like many other steroid formulations, is sensitive to heat. Therefore, it should not be autoclaved when it is desirable to sterilize the exterior of the vial. The lowest possible dose of corticosteroid should be used to control the condition under treatment. When reduction in dosage is possible, the reduction should be gradual. Since complications of treatment with glucocorticoids are dependent on the size of the dose and the duration of treatment, a risk/benefit decision must be made in each individual case as to dose and duration of treatment and as to whether daily or intermittent therapy should be used. 						conditions. Discontinuation of corticosteroids may result in clinical improvement. Cardio-renal As sodium retentionwith resultant edema and potassium loss may occur in patients receiving corticosteroids, these agents should be used with caution in patients with congestive heart failure, hypertension, or renal insufficiency. Endocrine Drug-induced secondary adrenocortical insufficiency may be minimized by gradual reduction of dosage. This type of relative insufficiency may persist for months after discontinuation of therapy. Therefore, in any situation of stress occurring during that period, naturally occurring glucocorticoids (hydrocortisone cortisone), which also have salt-retaining properties, rather than betamethasone, are the appropriate choices as replacement therapy in adrenocortical deficiency states. Gastrointestinal Steroids should be used with caution in active or latent peptic ulcers, diverticulitis, fresh intestinal anastomoses, and nonspecific ulcerative colitis, since they may increase the risk of a perforation. Signs of peritoneal irritation following gastrointestinal perforation in patients receiving corticosteroids may be minimal or absent. There is an enhanced effect of corticosteroids in patients with cirrhosis.

Square Pharmaceuticals Ltd., (Dhaka Unit), Kaliakoir, Gazipur	Calcium L-5 Methyltetrahydrofolate 1 mg Tablet	Calcium L-5 Methyltetrahydrofolate USP 1 mg Tablet	Therapeutic Class: Vitamins and Combinations Therapeutic Code: 078	Folic acid is the man-made form of folate. Folate is a B-vitamin naturally found in some foods. It is needed to form healthy cells, especially red blood cells. Folic acid supplements may come in different forms (such as L-methylfolate, levomefolate, methyltetrahydrofolate). They are used to treat or prevent low folate levels. Low folate levels can lead to certain types of anemia. Conditions that can cause low folate levels include poor diet, pregnancy, alcoholism, liver disease, certain stomach/intestinal problems, kidney dialysis, among others. Women of childbearing age should receive adequate amounts of folic acid either through their diet or supplements to prevent infant spinal cord birth defects. Romiplostim should be used only in patients with ITP whose degree of thrombocytopenia and clinical condition increase the risk for bleeding. Romiplostim should not be used in an attempt to normalize platelet counts.	Contraindications: None Side-effect: The most common adverse reactions (≥ 5% higher patient incidence in Romiplostim versus placebo) are arthralgia, dizziness, insomnia, myalgia, pain in extremity, abdominal pain, shoulder pain, dyspepsia, and paresthesia. Headache was the most commonly reported adverse reaction that did not occur at ≥ 5% higher patient incidence in Romiplostim versus placebo. Warning and Precautions: Romiplostim increases the risk for reticulin deposition within the bone marrow; clinical studies have not ruled out the possibility that reticulin and other fiber deposition may result in bone marrow fibrosis with cytopenias. Monitor peripheral blood for signs of marrow fibrosis. Discontinuation of Romiplostim may result in worsened thrombocytopenia than was present prior to Romiplostim therapy. 						bronchitis (0.1%). Because clinical trials are conducted under widely varying and controlled conditions, adverse reaction rates observed in clinical trials of a drug cannot be directly compared to rates in the clinical trials of another drug and may not predict the rates observed in a broader patient population in clinical practice. The data described herein reflect exposure to Abatacept in patients with active RA in placebo-controlled studies (1955 patients with ORENCIA, 989 with placebo). The studies had either a double-blind, placebo-controlled period of 6 months (258 patients with Abatacept, 133 with placebo) or 1 year (1697 patients with Abatacept, 856 with placebo). A subset of these patients received concomitant biologic DMARD therapy, such as a TNF blocking agent (204 patients with Abatacept, 134 with placebo). Warning & Precautions: In controlled clinical trials, patients receiving concomitant Abatacept and TNF antagonist therapy experienced more infections (63%) and serious infections (4.4%) compared to patients treated with only TNF antagonists (43% and 0.8%, respectively) (see ADVERSE REACTIONS: Infections). These trials failed to demonstrate an important enhancement of efficacy with concomitant administration of ORENCIA with TNF antagonist; therefore, concurrent therapy with ORENCIA and a TNF antagonist is not recommended. While transitioning from TNF antagonist therapy to Abatacept therapy, patients should be monitored for signs of infection

Contraindication: Hypersensitivity to the active substances or to any of the excipients. Side Effects: Skin rash, itching, dizziness, swelling of face and lips. Warning & Precaution: If symptoms do not improve after 7 days, the clinical situation should be reviewed. This medicinal product contains 235 mg (11 mmol) of sodium per four-tablet dose, equivalent to 12.65% of the WHO recommended maximum daily intake for sodium. The maximum daily dose of this product is equivalent to 50.6% of the WHO recommended maximum daily intake for sodium. This product is considered high in sodium. This should be particularly taken into account for those on a low salt diet (e.g. in some cases of congestive heart failure and renal impairment). Each four-tablet dose contains 320 mg (3.2 mmol) of calcium carbonate. Care needs to be taken in treating patients with hypercalcaemia, nephrocalcinosis and recurrent calcium containing renal calculi. Due to its aspartame content this product should not be given to patients with phenylketonuria.		UKMHRA	অনুমোদনের সুপারিশ করা হয়।	অনুমোদন করা হয়।

						Warning & Precaution: Trimetazidine can cause or worsen parkinsonian symptoms (tremor, akinesia, hypertonia), which should be regularly investigated, especially in elderly patients. In doubtful cases, patients should be referred to a neurologist for appropriate investigations. The occurrence of movement disorders such as parkinsonian symptoms, restless leg syndrome, tremors, gait instability should lead to definitive withdrawal of trimetazidine. These cases have a low incidence and are usually reversible after treatment discontinuation. The majority of the patients recovered within 4 months after trimetazidine withdrawal. If parkinsonian symptoms persist more than 4 months after drug discontinuation, a neurologist opinion should be sought. Falls may occur, related to gait instability or hypotension, in particular in patients taking antihypertensive treatment. Caution should be exercised when prescribing trimetazidine to patients in whom an increased exposure is expected: -moderate renal impairment, - elderly patients older than 75 years old.

Impaired Renal Function: Triamterene and hydrochlorothiazide is contraindicated in patients with anuria, acute and chronic renal insufficiency or significant renal impairment. Hypersensitivity: Triamterene and hydrochlorothiazide should not be used in patients who are hypersensitive to triamterene or hydrochlorothiazide or other sulfonamide-derived drugs. If hyperkalemia is suspected, (warning signs include paresthesias, muscular weakness, fatigue, flaccid paralysis of the extremities, bradycardia and shock) an electrocardiogram (ECG) should be obtained. However, it is important to monitor serum potassium levels because mild hyperkalemia may not be associated with ECG changes. If hyperkalemia is present, Triamterene and hydrochlorothiazide should be discontinued immediately and a thiazide alone should be substituted. If the serum potassium exceeds 6.5 mEq/liter, more vigorous therapy is required. The clinical situation dictates the procedures to be employed. These include the intravenous administration of calcium chloride solution, sodium bicarbonate solution and/or the oral or parenteral administration of glucose with a rapid-acting insulin preparation. Cationic exchange resins such as sodium polystyrene sulfonate may be orally or rectally administered. Persistent hyperkalemia may require dialysis. 						presence of renal impairment. Patients with mild renal functional impairment should not receive this drug without frequent and continuing monitoring of serum electrolytes. Cumulative drug effects may be observed in patients with impaired renal function. The renal clearances of hydrochlorothiazide and the pharmacologically active metabolite of triamterene, the sulfate ester of hydroxyl triamterene, have been shown to be reduced and the plasma levels increased following Triamterene and hydrochlorothiazide administration to elderly patients and patients with impaired renal function. Hyperkalemia has been reported in diabetic patients with the use of potassium-conserving agents even in the absence of apparent renal impairment. Accordingly, Triamterene and hydrochlorothiazide should be avoided in diabetic patients. If it is employed, serum electrolytes must be frequently monitored. Because of the potassium-sparing properties of angiotensin-converting enzyme (ACE) inhibitors, Triamterene and hydrochlorothiazide should be used cautiously, if at all, with these agents. Metabolic or Respiratory Acidosis: Potassium-conserving therapy should also be avoided in severely ill patients in whom respiratory or metabolic acidosis may occur. Acidosis may be associated with rapid elevations in serum potassium levels. If Triamterene and hydrochlorothiazide is employed, frequent evaluations of acid/base balance and serum electrolytes are necessary. Acute Myopia and Secondary Angle-Closure Glaucoma: Hydrochlorothiazide, a sulfonamide, can cause an idiosyncratic reaction, resulting in acute transient myopia and acute angle-closure

Untreated acute angle-closure glaucoma can lead to permanent vision loss. The primary treatment is to discontinue hydrochlorothiazide as rapidly as possible. Prompt medical or surgical treatments may need to be considered if the intraocular pressure remains uncontrolled. Risk factors for developing acute angle-closure glaucoma may include a history of sulfonamide or penicillin allergy. Hyperkalemia is more likely to occur in patients with renal impairment, diabetes (even without evidence of renal impairment), or elderly or severely ill patients. Since uncorrected hyperkalemia may be fatal, serum potassium levels must be monitored at frequent intervals especially in patients first receiving Triamterene and hydrochlorothiazide, when dosages are changed or with any illness that may influence renal function

The aspirin component of this combination is indicated for: • Reducing the combined risk of death and nonfatal stroke in patients who have had ischemic stroke or transient ischemia of the brain due to fibrin platelet emboli, • Reducing the combined risk of death and nonfatal MI in patients with a previous MI or unstable angina pectoris, • Reducing the combined risk of MI and sudden death in patients with chronic stable angina pectoris, • Using in patients who have undergone revascularization procedures (Coronary Artery Bypass Graft [CABG] or Percutaneous Transluminal Coronary Angioplasty [PTCA]) when there is a pre-existing condition for which aspirin is already indicated. The omeprazole component is indicated for decreasing the risk of developing aspirin associated gastric ulcers in patients at risk for developing aspirin-associated gastric ulcers due to age (≥ 55) or documented history of gastric ulcers.	the risk of Reye's Syndrome. • Known hypersensitivity to aspirin, omeprazole, substituted benzimidazoles or to any of the excipients of this combination. • Patients receiving rilpivirine-containing products. Side Effects: Most common adverse reactions in adults (≥ 2%) are: gastritis, nausea, diarrhea, gastric polyps, and non-cardiac chest pain. Warnings and precautions: • Coagulation Abnormalities: Risk of increased bleeding time with aspirin, especially in patients with inherited (hemophilia) or acquired (liver disease or vitamin K deficiency) bleeding disorders. Patients should monitor the signs of increased bleeding. • GI Adverse Reactions (including ulceration and bleeding): Monitoring for signs and symptoms and discontinuing treatment if bleeding occurs. • Bleeding Risk with Use of Alcohol: Patient should avoid heavy alcohol use (three or more drinks every day). • Reduction in Antiplatelet Activity with Clopidogrel due to Interference with CYP2C19 Metabolism: Considering other antiplatelet therapy. • Reduction in Efficacy of Ticagrelor: Patient should avoid use with the 325/40 strength of this combination. • Renal Failure: patients with severe renal

						reported a lowered incidence of endometrial hyperplasia than would be induced by estrogen treatment alone. Endometrial hyperplasia may be a precursor to endometrial cancer. There are, however, possible risks which may be associated with the use of progestins with estrogens compared to estrogen-alone regimens. These include a possible increased risk of breast cancer. 2. Elevated blood pressure In a small number of case reports, substantial increases in blood pressure have been attributed to idiosyncratic reactions to estrogens. In a large, randomized, placebo-controlled clinical trial, a generalized effect of estrogens on blood pressure was not seen. Blood pressure should be monitored at regular intervals with estrogen use. 3. Hypertriglyceridemia: In patients with pre-existing hypertriglyceridemia, estrogen therapy may be associated with elevations of plasma triglycerides leading to pancreatitis and other complications. 4. Impaired liver function and past history of cholestatic jaundice: Estrogens may be poorly metabolized in patients with impaired liver function. For patients with a history of cholestatic jaundice associated with past estrogen use or with pregnancy, caution should be exercised and in the case of recurrence, medication should be discontinued. 5. Hypothyroidism: Estrogen administration leads to increased thyroid-binding globulin

Patients with normal thyroid function can compensate for the increased TBG by making more thyroid hormone, thus maintaining free T4 and T3 serum concentrations in the normal range. There are no particular contraindications except for those of embolisation and, especially, the presence of portal thrombosis. <u>Contraindications specific to use in endocrinology:</u> • Large, multi-nodular goitre in patients over 45 years of age, due to the significant risk of hyperthyroidism. • During breast-feeding. **<u>Side-effects:</u>** In diagnostic radiology: • Lymphography: A sharp increase in temperature followed by a fever of 38 °C to 39 °C may occur within 24 hours following the examination. Fat micro-emboli may occur with or without symptoms. In very rare cases, they may resemble organic emboli in their appearance and size. They most commonly present as punctiform opacities on lung X-rays. Temporary increases in temperature are possible. Fat micro-emboli usually occur following an overdose of contrast agent or excessively rapid infusion. Anatomical abnormalities such as lymphovenous fistulas or a decrease in the capacity of

						lymph nodes to retain the contrast agent (in elderly patients, or after radiotherapy or cytostatic therapy) make their occurrence more likely. Patients with a right-to-left cardiac shunt and those with a massive pulmonary embolism are particularly at risk for fat micro-emboli in the brain. • Diagnosis of hepatic lesions: The patient's temperature frequently rises and other rarer complications may be seen, such as nausea, vomiting and diarrhoea. In interventional radiology: • Transarterial chemoembolisation: Most adverse reactions are not caused by LIPIODOL ULTRA FLUIDE but rather by anti-cancer medicines or the embolisation itself. The most common adverse reactions to treatment by transarterial chemoembolisation are post-embolisation syndrome (fever, abdominal pain, nausea, vomiting) and temporary changes in liver function tests. Pre-existing hepatocellular deficiency may be exacerbated following use of Lipiodol as part of a hepatic intra-arterial procedure and result in serious
